

Programming Design System Final Project Proposal

Cristina Cannella

What is the content you're designing?

A series of related book covers for the Paradox of Choice (again)

What is the intended form of your project?

4 prints from 2 recursive programs that each highlight one random choice among many

Why code?

The use of recursion, randomness, and noise to help convey the themes of the book- feelings of confusion, being lost, and arbitrariness related to making choices among overwhelming options (hopefully)
