

Programming Design Final

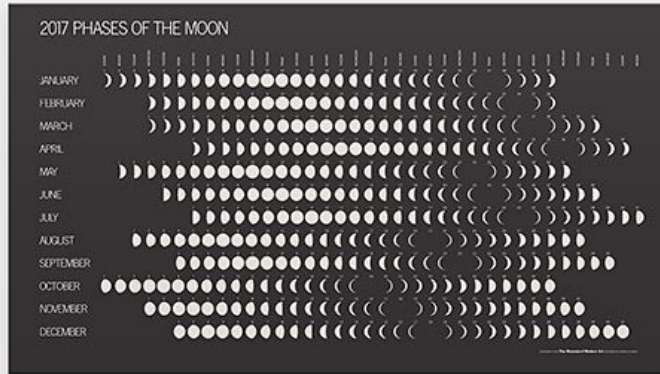

Katie Temrowski

What is the content you're designing?

I will be redesigning the traditional calendar style in favor of a grid based, minimal style

What is the intended form of your project?

I want to redesign the calendar to be more streamlined layout. Ideally the layout will be more intuitive with how we read and identify with time. I have found calendars

Some ideas:

- One large sheet with a grid, each month being a different square
- One long graph with the days
- A very long scroll

Why is this done in code?

```
{"Year2017": {  
  "month": "January",  
  "day1": {  
    "daynum": 1,  
    "dayname": "Sunday",  
    "holiday": "new years day"  
  },  
  "day2": {  
    "daynum": 2,  
    "dayname": "Monday",  
    "holiday": null  
  }  
}
```

-- And because I can play with layout and design easily with an array of the days!
